

Marine Transportation Fellowship

Marine Policy Program
Graduate College of Marine Studies

Funding is available FROM THE Marine Policy Program in the Graduate College of Marine Studies at the UNIVERSITY OF DELAWARE for qualified student applicants interested in policy-focused research related to transportation, energy, and environment. The Marine Policy Program IS expanding its maritime transportation research focus. Today's marine policy makers and maritime transportation professionals need to make difficult decisions at the interface between shipping technologies, coastal environments, and trade economics. Research topics may include air pollution control, ballast water management, and fleet modernization and expansion. Ongoing research in the Marine Policy Program addresses broader environmental and technology decisions related to coastal zone management, fleet modernization, fishery and trade economics. Fellowship funds include tuition waiver and stipend for two years. Twelve-month stipends are \$15,000 for M.S. students and \$16,000 for Ph.D. students.

The Marine Policy Program in the Graduate College of Marine Studies prepares students for successful careers in government and industry. We are looking for the next generation of maritime transportation professional needed to meet these complex challenges that affect ships, ports, intermodal logistics, communities, and the environment. Motivated individuals with industry experience, education in technical and/or economic disciplines, and a strong interest in interdisciplinary policy-focused research are encouraged to apply. Consideration of applications will begin immediately, but Fall 2001 applications must be received NO LATER THAN March 1, 2000.

For information about the Marine Policy Program, see our website at www.ocean.udel.edu or contact Professor James Corbett, Marine Policy Program, Graduate College of Marine Studies, University of Delaware, Newark, DE 19716, tel: (302) 831-0768, email: jcorbett@udel.edu.
